THE PROBLEM

Voters hear the claim. The answer is on page 4 of 40.

THE CLAIM

„… die Bevölkerung seit Einführung der Personenfreizügigkeit im Jahr 2002 um rund 500'000 Personen gewachsen ist.“

“… the population has grown by about 500,000 since free movement began in 2002.”

OFFICIAL BOOKLET · PAGE 4

„Seit Einführung der Personenfreizügigkeit im Jahr 2002 ist die Bevölkerung um rund 1,7 Millionen Personen gewachsen.“

Na

CONTRADICTION

Claim–label pair from the OST demo set (MNLIoverSwissVotingBooklets, label 2). Booklet: Federal Council explanations for the vote of 14 June 2026, German edition, 40 pages, PDF page 4.

THE TASK

Booklet + claim in, a ballot mark out.

Voting booklet
PDF · German, French or Italian

Claim
one sentence · DE, FR or IT

→

GeaNaVid
CLI · Apertus v1.5

→

Gea	entailment	0
Na	contradiction	2
Vid	neutral	1

+ the passages it rests on · tokens used · seconds taken

JUDGED ON

Macro-F1 on a hidden benchmark · **evidence quality** · **input tokens** · **inference time**

All 9 claim/booklet language combinations. Labels 0/1/2 and judging criteria as set by OST in the Hack Apertus challenge brief.

THE NAME

Gea. Na. Vid.

Romansh, the fourth national language, for Yes, No and Blank. All three words come from the Romansh voting booklets.

Gea

Yes → `entailment`

„... recumondan cussegl federal e parlament da metter in **Gea** *en l'urna ...“*

“... the Federal Council and Parliament recommend putting a Yes in the ballot box ...”

`Booklet of 12 June 1994`

Na

No → `contradiction`

„Nus recumandain in **NA** *a las chapellinas blaus.“*

“We recommend a NO to the blue-helmet troops.” (referendum committee)

`Booklet of 12 June 1994`

Vid

Blank, empty → `neutral`

„... abitaziuns da vacanzas ch'èn savens **vidas** *...“*

“... holiday homes that mostly stand empty ...”

`Booklet of 25 June 1995`

Romansh text from the aligned corpus VotingBooklets-v1 (Stüssi & Vamvas, SwissText 2026, CC BY 4.0); English glosses ours.

THE CONTEXT

Narrow first, then let Apertus read.

1 **Top-5 passages of the right proposal, with page neighbours**
the vote title narrows the booklet, BM25 picks the passages, the section the claim names first

≈ 1,100 tokens of passages

CLAIM IN ANOTHER LANGUAGE? Apertus translates it into the booklet language first

2 **Translation**
one short call, then the same search

+ ≈ 300 tokens

full **The whole booklet**
the baseline OST recommends

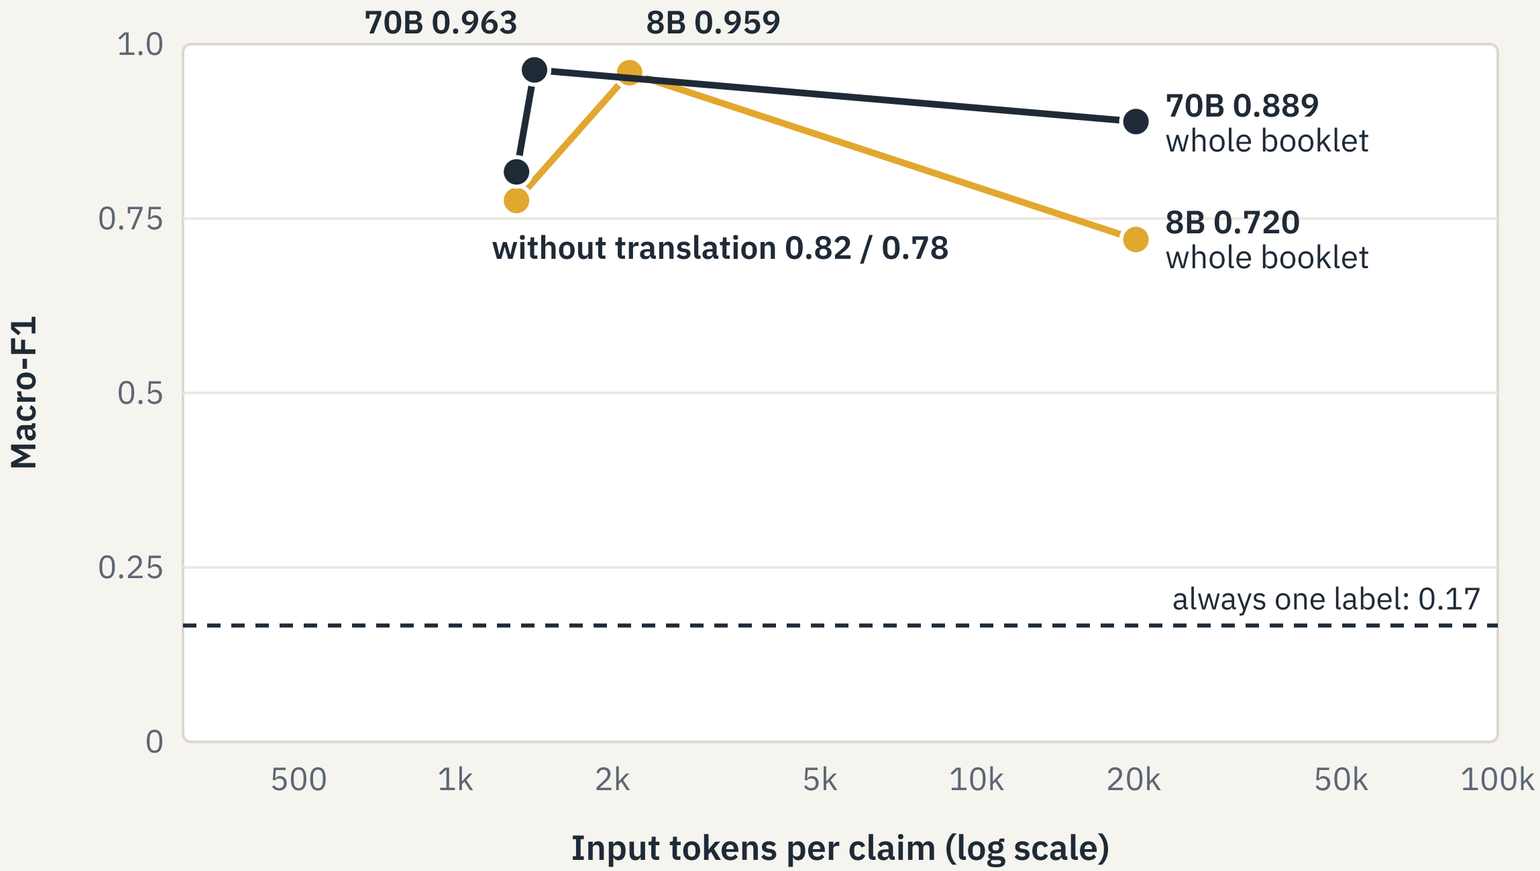

≈ 20,200 tokens

Per claim: 1,418 input tokens with 70B, 2,159 with 8B (three worked examples, a second look at unsure neutral answers)

Mean input tokens per claim as reported by the API, OST v1.1 test split (493 pairs), Apertus v1.5, 14 October 2026.

THE TRADE-OFF

Under a ninth of the tokens. Better verdicts.

Apertus 8B

GeaNaVid 0.959 with 2,159 tokens. Whole booklet 0.720 with 20,242.

Apertus 70B

GeaNaVid 0.963 with 1,418 tokens. Whole booklet 0.889.

Beginner task

Claim + reference text: 0.977 (8B) and 0.980 (70B).

OST MNLIoverSwissVotingBooklets v1.1, test split: 493 pairs from 7 voting dates; 95 % cluster intervals 0.933–0.980 (8B), 0.942–0.981 (70B). Test scores also decided which variants were kept, so we add checks not used for tuning: 546 development claims outside the tuning subset 0.971 (8B) / 0.967 (70B), and unseen booklets (synthetic hold-out; 8B in its second evaluation, first 0.845) 0.874 / 0.932 vs 0.665 / 0.872 whole booklet. 14 October 2026.

ACROSS LANGUAGES

Claim in Italian, booklet in German. The evidence stays German.

	DE	FR	IT
DE	0.98	0.94	0.91
FR	0.96	1.00	0.86
IT	1.00	0.96	1.00

Macro-F1 per pair, Apertus 8B. Rows: claim language · columns: booklet language. Framed: same language.

0.70 → 0.94

macro-F1 on the 330 cross-lingual test claims (8B), before and after Apertus translates the claim into the booklet language.

> The search runs on the translation, the evidence is quoted from the booklet as it is. No language field is needed: the claim language is detected.

OST v1.1 test split, 38 to 74 claims per pair, so single cells vary by about ±0.05. Same-language 0.993, cross-lingual 0.943 (8B); 70B 0.980 and 0.955.

EVIDENCE

Every Yes or No points to a line in the booklet.

Na `contradiction · label 2`

Claim (Italian): the reduced VAT rate falls from 2.5 to 2.4 per cent

> „Der dafür geltende reduzierte Mehrwertsteuersatz steigt von 2,5 auf 2,6 Prozent; …“

`25.09.2022 · DE · page 28 · AHV 21: additional financing by VAT`

`input tokens 2,794  output tokens 52  Apertus 8B`

Quotes, not paraphrase

The evidence is booklet sentences, verbatim, each with its PDF page, from the section the claim names, chosen after the verdict without another model call.

Evidence first, label second

Apertus names the passages before it gives the verdict, in strict JSON.

Not voting advice

GeaNaVid says what the booklet says. It never says how to vote.

OST case v1-1484 (development split), live demo, 4 October 2026. Scored by OST's own evaluation script, one of our quoted sentences lies in the gold passage for 96.9 % (8B) and 96.0 % (70B) of the entailment/contradiction cases of the v1.1 test split.

TEAM APERTOOL

Gea, Na or Vid.
Yes or No: with the line behind it.
